EDUCATION

Athabasca University

Bachelor of Science in Computing and Information Systems (BSc CIS)

Expected Graduation: September 2028

Athabasca, AB

Algonquin College

Computer Programming Diploma

Graduated: April 2026

Ottawa, ON

- **Relevant Coursework:** Object-Oriented Programming with Design Patterns, Database Systems, Advanced Database Topics, Operating System Fundamentals, Web Programming, Enterprise Application Programming, Systems Analysis and Design, Network Programming

LEADERSHIP

MeetUp

Software Developer

Ottawa, ON

January 2026 - Present

- Built an Android social event platform using **Java**, **Firebase Authentication**, and **SQLite/Room**, enabling users to discover, create, and join city-based social events through a simple mobile interface.
- Developed core features including secure signup/login, city hub selection, event browsing, event creation, and RSVP management, supporting the app's main end-to-end user workflows.
- Implemented input validation and local persistence for event details and RSVP state, reducing invalid event submissions by **35%** and improving reliability across core app interactions.

PROJECTS

BullBearAI | *Python, scikit-learn, Pandas, Matplotlib*

- Built a machine learning application in **Python** to forecast stock price movements using historical financial datasets of **5,000+ records**, enabling faster and more consistent trend analysis.
- Developed preprocessing pipelines for normalization, missing-value handling, and feature cleaning, reducing missing-data noise by **15%** and improving model input consistency.
- Trained and evaluated **3** predictive model variants with **scikit-learn**, improving validation accuracy from a **64%** baseline to approximately **72%**.

Guardian News Reader | *Java, Android Studio, Room, REST API*

- Built an Android news reader in **Java** integrating **The Guardian API**, enabling keyword-based article search, detailed article views, and browser redirection across **4+ user-facing screens**.
- Implemented local persistence with **Room Database** and **SharedPreferences**, supporting saved favorites, retained search terms, and offline access to bookmarked articles between sessions.
- Improved article search and navigation performance by reducing average article search latency by **22%** and decreasing app startup time by **18%**.

Honeypot Network Security Monitor | *Python, Flask, Socket Programming*

- Developed a network security honeypot in **Python** that emulates **6+ services** including SSH, HTTP, FTP, Telnet, MySQL, and Redis to capture and log unauthorized connection attempts in real time.
- Built a **Flask** monitoring dashboard for live visualization of IP activity, service usage, and attack trends, surfacing suspicious connection events to the dashboard in under **2 seconds**.

Inventory Management System | *Java, MySQL*

- Built a role-based inventory platform using **Java**, **JDBC**, and **MySQL**, supporting product tracking, record updates, and synchronized backend storage across core inventory workflows.
- Implemented admin-restricted CRUD functionality and view-only permissions for regular users, strengthening access control and helping protect inventory records from unauthorized changes.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML, CSS, SQL, Lua, COBOL

Developer Tools: Docker, Git, Linux, Debian, Oracle, VMware, Android Studio, Excel, MySQL, PostgreSQL

Libraries/Frameworks: ReactJS, Spring Boot, Flask, scikit-learn, Pandas, Matplotlib
